- (1) Wall Mount Bracket Bolt ( $\frac{3}{8}$ " -16,  $\frac{3}{4}$ " Long)
- (1) European Thread Adapter
- (2) Drywall Anchor
- (2) Concrete Anchor
- (2) Screws for Drywall Anchor
- (2) Washers

# Installation

Before you begin to install your Universal Wall Mount Kit, locate the ideal position to avoid conductive objects and walls that may affect your antenna's performance.

1. Use the wall mount bracket as a guide to mark the 2 anchor points with a pencil onto your mounting surface.
2. **For Drywall or Wood Stud Installation**
  - A. Use a #2 Phillips screwdriver to drive the anchor into the drywall/wood stud.
  - B. Continue turning the anchor until flush with the wall. Avoid overtightening.
  - C. Using the provided drywall anchor screws and washers, attach the wall mount bracket to the installed anchors. Do not overtighten.
3. **For Concrete Installation**
  - A. Use a Hammer Drill with a 3/16" Hammer Drill Bit to drill your mounting holes.
    - B. Remove debris from the drilled hole using compressed air.
    - C. Attach the wall mount bracket using the provided concrete anchors. Use a 5/16" Hex nut driver with the hammering function turned off.
4. With the Universal Wall Mount Kit now securely attached to the wall, you may now attach your antenna to the bracket.
5. Attach the European thread adapter to your antenna's stand mount.
6. Align your antenna to the mounting hole on the bracket, attach using the 3/8" Wall Mount Bracket Bolt.
